### Challenge # 18 Stop Motion Animation

Stop Motion Animation, explained..

**Stop motion animation is a film making technique that makes inanimate objects appear to move on their own. Think Wallace and Grommit.**

To make it work, you place an object in front of a camera and snap a photo. You then move the object a tiny bit and snap another photo. Repeat this process twenty to ten thousand times, **play back the sequence in rapid progression**, and the object appears to move fluidly across the screen.

You can use any toys or objects from around the house.

There are lots of free apps available on iphone/ipad or android to support you with this.

Have a go at home and share your short films on our facebook page
